Indian Village Manor Election Results 2025

The Board of Directors recently conducted an election to determine the officer positions and the length of each. They are as follows:

President:
J Gregory Love
2-year term (exp. 06-27)

Vice President:
Christina Hajj
2-year term (exp.06-27)

Treasurer:
Marilyn Wheaton
2-year term (exp. 06-27)

Secretary:
Paris Ross
2-year term (exp.06-26)

Member:
Roberta Henrion
1-year term (exp. 06-26)

Congratulate your Board of Directors members who serve in these uncompensated positions for the greater good of the association. As you see them around the property, thank them for their commitment.

Finance Committee

At the January 5, 2025 open board meeting two co-owners requested that the board of directors create a finance committee that would be advisory in nature.

We now have a finance committee composed of:

Marilyn L. Wheaton, Treasurer

Ron Davis, 6D

Jeff Stassen, 7E

Vance Haagen, IVM Business Manager.

The committee will meet bi-annually or as two or more members deem appropriate.

FINANCE COMMITTEE

Seasonal Shifts, Smart Moves

As the last hot days of summer linger, staying cool without overusing energy-intensive air conditioning becomes a priority for both comfort and sustainability. There are several energy-efficient strategies that can help keep your home cool while reducing strain on your electricity bill and the environment. These methods are not only practical for the final stretch of summer but also set the stage for energy-conscious habits moving into the fall.

One of the simplest and most effective ways to stay cool is by using fans strategically. Ceiling fans and portable fans consume far less energy than air conditioning units and can make a room feel up to four degrees cooler. To maximize their effectiveness, make sure ceiling fans are set to spin counterclockwise in the summer to create a breeze. Box fans in windows can help draw in cooler evening air or exhaust hot indoor air during the day, improving ventilation without extra cost.

Managing sunlight is another key factor in controlling indoor temperatures. Closing curtains or blinds during the hottest parts of the day can significantly reduce heat gain inside your home. Consider using

blackout curtains or reflective window films that block solar radiation. In addition, planting shade trees or installing exterior awnings can provide long-term cooling benefits while enhancing the curb appeal of your home.

On especially hot days, enjoy a nice meal at your favorite eatery, opt for meals that don't require the stove or oven, or fire up the grills. Avoid running heat-generating appliances like dryers or dishwashers during the heat of the day. Switching to energy-efficient LED light bulbs can also reduce unwanted heat.

As summer winds down and fall approaches, it's the perfect time to prepare your home for the shift in seasons. Begin by checking for air leaks or insulation gaps—small issues that can have a big impact on both cooling efficiency in summer and heating performance in the colder months. Seal cracks around windows and doors to keep warm air in and chilly drafts out as temperatures begin to drop. Don't forget to reverse your ceiling fans to spin clockwise, helping circulate warm air more effectively during the fall and winter. By taking these simple, energy-efficient steps now, you'll stay comfortable through the final warm days of summer and head into fall with a home that's ready for whatever the season brings.

THE ENERGY COMMITTEE

Sustainable Heating at IVM: Something to Consider

A new report from the American Council for an Energy-Efficient Economy (ACEEE) highlights promising developments in heat pump technologies that could make it more feasible and affordable to decarbonize large apartment buildings, especially those in the Northeast that rely on steam or hot water systems.

Traditional heat pump options—like central systems or mini-splits—can be costly and disruptive to install. However, emerging solutions such as window-mounted heat pumps and central air-to-water heat pumps are showing strong potential to lower costs and simplify installation.

The ACEEE found that window heat pumps are currently the most cost-effective and easiest to install, with NYC's pilot program in public housing showing 87% energy savings, high resident satisfaction, and significantly reduced installation times. Air-to-water systems are also promising,

particularly because they can integrate with existing radiators, but they currently face challenges due to compatibility issues with U.S. high-temperature water systems and limited performance data.

Other innovations include all-in-one wall-mounted heat pumps and improved packaged terminal units that may offer alternatives for buildings where window units are not suitable. Still, even these more streamlined technologies have higher upfront costs than conventional boilers, underscoring the need for state incentives, financing support, and rate structures that make heat pumps more accessible.

While the newer heat pump technologies are increasingly available to consumers - particularly in colder climates - momentum is growing thanks to bulk purchases by cities, utilities, and institutions. With the right policy support and financial investment, these innovations have strong potential to drive the decarbonization of large residential buildings, helping to reduce both emissions and long-term energy costs. Although heat pumps are already widely used across Europe, their adoption in the United States remains more limited. If co-owners are interested in purchasing all-weather heat pumps, it would be worthwhile to explore bulk pricing options, which could significantly lower costs when multiple units are purchased together.

It should also be noted that even though heat pumps have to work harder and may be less efficient in cold weather, heat pumps do very well in Scandinavia and Maine without backup heat sources.

It would be good to see a mention of heat pumps in the article about dealing with the hot weather. You still have that open invitation to come down the hall on the hottest of days to see how well (quietly, effectively, attractively) 2 heat pumps maintain comfortable living in a condo unit at IVM. Remember, the building updraft rises all year round. It helps to keep the 7th floor warmer in the winter, and it is doing the same in the summer!

Considerations for IVM Co-Owners:

In many IVM condominiums, radiators are positioned directly beneath windows—the same location typically required for installing a window-mounted heat pump. To accommodate this upgrade, co-owners would likely need to remove the existing radiator, which may also involve uncovering it first. Additionally, cosmetic

(Continued on page 5)

(Continued from page 4)

repairs may be necessary to ensure the area integrates seamlessly with the surrounding interior décor.

A reasonable cost estimate for removing one radiator and restoring the surrounding space—including materials and design-matching repairs—is approximately \$3,000, though actual costs may vary based on unit layout and finishes.

During those extremely hot days this summer, Jane and Vernon Strand report that they have been very comfortable with two heat pumps installed earlier this year. This is an indication that co-owners can maintain a comfortable living environment despite 90-plus degree temperatures. Those interested in seeing the heat pumps in action are welcome to visit the Strands in 7N.

THE ENERGY COMMITTEE

State of the IVM Emergency Preparedness Team

The following is a summary of the Indian Village Manor Emergency Preparedness Team. It will illuminate individuals that we can count upon in the event of a myriad of incidents that may

occur. These include, but are not limited to Fire, Strom, Elevator Entrapment, Medical or a power outage.

These individuals* have all completed a twenty-hour FEMA certified basic training program, (CERT) Community Emergency Response Team preparation. This Team is joined by a group of trusted auxiliary individuals who have participated on a regular basis.

They are as follows:

Vance Hagen* (Business Manager)
Donna Rowell* (2/A)

Alton Moses* (Interim Maintenance Manager)
Duane Johnson* (1/C)
Daviana Jenkins* (Entry Control)
John Poe* (2/N)
Komesse Eiland* (Entry Control)
Darchelle Strickland Love* (7/A)
Arnett Vaughn* (Entry Control)
J G Love* (7/A)
Daryl Woods* (after hours emergencies)

Auxiliary:

David Robinson (1/M)
Gloria Robinson (1/M)
Mike Tyson (1/D)
Gregory Thom (7/L)

Because our last evacuation drill took place just before COVID, we are preparing for a full-scale Detroit Fire Department supervised evacuation drill to occur this fall. We will keep you posted as to the particulars of this important exercise.

If you believe that you have what it takes to join the Emergency Preparedness Team, you may forward an email of interest to the Chairperson at your convenience. Thank you!

DTE MANIFOLD AFTER ACTION WORK

As you are aware, on July 23, 2025, DTE completed the asphalt work in several areas on the west driveway. The following day they completed the masonry work directly under the manifold.

The Association and Management would like to thank Co-owners and Residents for your patience regarding completion of this necessary work. The logistics regarding transportation to the hospital lot was conducted flawlessly.

IVM MANAGEMENT

ENTRY CONTROL BOOTH

The Entry Control Booth renovation has been completed. This included the following:

- New Roof
- New Exterior/Interior Siding
- New Windows
- New Interior Floor
- New Shelving
- New Granite Counter-top
- New Interior and Exterior Lighting
- New Split HVAC Heat/Cooling System
- New up to Code Electrical System

The Association and Management believe that this project demonstrates our commitment to our dedicated Entry Control Staff.

IVM MANAGEMENT

Holiday Weekend Reservations for the Waterfront

At the request of several co-owners, the Board of Directors has adopted a new policy regarding the reservation of the Riverfront Patio on major holidays.

Memorial Day (the last Monday in May)
Independence Day (July 4)
Labor Day (the first Monday in September)

Memorial Day and Labor Day weekend will be considered holiday weekends. If July 4 falls on a Friday or a Monday, the three days will be considered a holiday weekend.

Co-owners may not reserve the riverfront for personal events on these weekends.

Marilyn Wheaton
BOARD MEMBER

Contractor Requirements

The purpose of this article is to provide important information for contractors working for residents and the IVM Condominium Association.

Contractors should comply with the following procedures prior and during their work at IVM:

- All contractors must provide the IVM office with a copy of any City of Detroit required permits, licenses and insurances, plans and drawings pertaining to the

work that they are performing prior to starting work.

- Any construction/alteration plans must be discussed with the IVM maintenance manager to protect the IVMCA from liability, mishaps and accidents by contractors.
- On weekdays during regular business hours, all contractors must sign in on the contractor's log at the IVM office. After hours and on weekends at the guard's booth.
- Contractors are to enter the building at the North most bay. That bay door is open from

7:30am to 4pm Monday through Friday. No exit door can be propped open for re-entry. Any after-hours or weekend entry must be done by co-owners whom they are working for. Contractors cannot use the front and rear main entries or the passenger elevators.

- When working in the units, loud construction noise must cease by 7pm.
- All materials must be brought through the bay doors and only transported on the service elevators.
- If the contractor must bring a trailer or dumpster, they must schedule it with the IVM office. Trailers or dumpsters are not allowed to be on the premises for more than twenty-four hours.
- All construction debris must be taken off site by contractor/co-owner/worker.
- No construction materials are ever to be discarded out of windows from units.
- If during construction, smoke

(Continued on page 8)

(Continued from page 7)

or dust is made, do not open the rear or front doors. Open the windows of the unit only. Opening the doors will engage the buildings fire alarm system.

- There is no smoking in any common area in the building.
- At the end of the workday, contractors/workers are to clean up any debris, trash etc. that may have been left in any common areas including the service

elevators.

- Contractors/workers are not allowed to wander around the building and should stay in or near the unit that they are working in.
- Contractors must park along the retaining wall on the east side of the building near the bays unless otherwise instructed by the IVM office. Only the shopping carts can be used by contractors or workmen {if available). No IVM flatbed carts are to be used.

Under any other circumstances, contractors must bring their own carts.

- Contractors are not allowed to place fliers or advertisements at residents' doors or in mail slots, only on the bulletin board next to the IVM office.

If you have any questions regarding this information, contact the IVM Management

IVM MANAGEMENT

Quality of Life Improvements

The Association and Management have been fielding concerns about the stench emanating from our trash compactor for the past two years. To that end, we begin increasing the amount of enzymes added to each load of trash on a regular basis. Moreover, this summer we adjusted the frequency of our pick-up schedule.

The positive results are based on 10 days of ninety degrees or more this summer, with the heat index

approaching one hundred degrees. We believe that this adjustment and approach has made a significant impact on controlling the inevitable odor. Clearly, it is having a positive impact.

The second quality of life improvement revolves around the American Cockroach. We have been laser focused on this issue. As such, we implemented a customized pest control plan. Our experience has taught us whenever we have major construction in the area, an increase in cockroaches occurs. Our neighbors reported that during the recent renovations at the foot of Owen Park (seawall replacement) they indicated an increase in sightings in their building.

Accordingly, we changed the cadence of our exterminator contractor's service application and increased the chemical concentration in the (superhighway) subbasement. We maintained our normal application in the public common areas. Despite the reported increase along the riverfront our efforts have been effective in controlling this nuisance. We believe that this is a sustainable practice that will effectively eliminate existing infestation and prevent future invasions from taking place.

This fall, in a proactive measure, we will be spraying each storage room. We will inform you in advance when access will be required to your storage unit. We ask everyone for their cooperation in this endeavor.

IVM MANAGEMENT

Squirrels, Squirrels, Squirrels

We have received a great number of complaints regarding squirrels and the nuisance that they have become around the building. They have caused damage to air conditioner vents, screens and built a sizable nest on the east side of the building, see photo.

Accordingly, Management began contacting the experts for their opinions and viable solutions. They included the following:

City of Detroit Animal Control Department.

They informed us that the City of Detroit Animal Control Department does not respond to issues with rodents. They recommended that we reach out to a private exterminating company that may handle squirrels. They also indicated that we may contact the Michigan Department of Natural Resources, Michigan Wildlife Division.

DNR, Michigan Wildlife Division

The Michigan Wildlife Division, like the City of Detroit Animal Control, indicated that they were not equipped to handle our issue and recommended that we

contact local pest control companies. However, they provided the following advice:

- Do not feed them
- Remove any potential food sources
- Refrain from baiting
- They are attracted to bird feeders (small nuts/seeds)
- Limit potential entry points, open windows, air conditioner ducts

Michigan Wildlife Division indicated that the key characteristics of squirrels that classify them as rodents are the ever-growing incisors, which they must wear down by gnawing. This explains why they grind through screens and hard plastics and air conditioner duct work.

We have reached out to a couple of private companies that recommended a product called "Squirrel Stopper" (Non-Toxic) which has been effective in the units where an application has been applied.

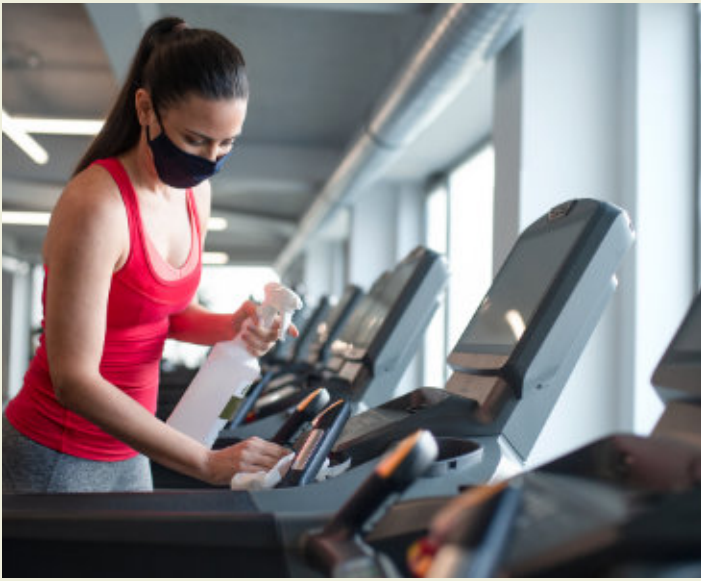

Please notify Management if you continue to experience squirrel issues. Thank you.

IVM MANAGEMENT

The IVM Beautification Committee

Your Beautification Committee continues to consider plans for the beautification of IVM at the Riverside entrance, the Jefferson entrance, and throughout the building. Ideas need to be researched and submitted to the Board for their approval. Please consider joining us at our next meet to be announced and held in late September.

JUDY BARTHWELL
BEAUTIFICATION COMMITTEE CHAIR

IVM Gym Reminders

To ensure a safe, clean, and respectful environment for everyone, please keep the following guidelines in mind when using the IVM gym:

CLEANLINESS AND HYGIENE

- Use the sanitary wipes provided to thoroughly clean equipment after each use. Be sure to wipe down benches, control panels, handles, bases, pedals, and any surfaces where perspiration may have dripped (front, back, and sides of the equipment).

- Disinfect free weights, bars, benches, and machine rails or knobs after use.

NOISE AND COURTESY

- Please use headphones when listening to music to avoid disturbing co-owners living above the gym.
- Avoid dropping heavy weights or allowing weight stacks on the Vectra machine to slam into place. These actions generate unnecessary noise and vibration.
- Safety and Equipment Use
- If you open a window during your workout, please remember to close it before leaving.
- Turn off lights, treadmills, ellipticals, and fans when not in use to conserve energy.
- Return free weights to their proper storage racks after use.
- Place exercise mats in the designated area against the wall—leaving them on the floor creates a trip hazard.

Thank you for doing your part to keep the IVM gym a safe, clean, and enjoyable space for everyone. Your cooperation is greatly appreciated!

IVM MANAGEMENT

Detroit Tax Info

For co-owners who are new to Michigan and/or Detroit, there are two tax deductions that may be of interest to you:

1) Principal Residence Exemption (PRE): this program exempts a residence from local school taxes up to 18 mills. To qualify, the residence must be occupied as a principal residence. For more information click [HERE](#):

2) Neighborhood Enterprise Zone Homestead (NEZH): this program reduces both the City of Detroit and the Wayne County Operating Millage by 50 percent. This typically results in a 15 to 20 percent savings for most homeowners. The residence must be a principal residence. Indian Village Manor is currently in a Neighborhood Enterprise Zone, and is therefore eligible. For more information click [HERE](#) and [HERE](#)

Melanie Peterson
COMMUNICATION COMMITTEE

Neighbor Spotlight:

To encourage neighbors to know each other better, the Communications Committee will profile two residents of Indian Village Manor in each edition of All Manor of Things. Subjects are chosen randomly, and participation is not mandatory. The hope is for everyone to feel free to greet their neighbor in the hallway and introduce themselves to each other. Everyone has a story to tell.

JUDITH THOMPSON-BARTHWELL, 1-K

Judy moved to Indian Village Manor in 1993 with her late husband, Judge Sidney Barthwell, Jr., remaining through its conversion from apartments to condominiums. She continues to live here for the same reasons that first attracted her—proximity to downtown and freeways, the Detroit River, and a diverse community. Restaurants, grocery stores, reliable power from buried lines, and daily garbage pickup add to the appeal.

Her grandparents migrated north during the Great Migration, and her parents were the first in their family to earn college degrees. Her father, an Army veteran, used the GI Bill to become a dentist. Judy grew up in Russell Woods, where her parents were among the first Black homeowners in the 1950s. Influenced by the Women's Movement, she graduated from a state college and taught music in Romulus Public Schools and Emerson School in Ann Arbor.

Independent and active, Judy is known for her commitment to community and neighbors. At Indian Village Manor, she chairs the Beautification Committee and serves on the Communications Committee. She is also the sole female member of the R&B band Birds Ova' Feather and studies jazz at MSU's Community Music School-Detroit Branch, which offers courses for all ages. For this teacher, learning is never over.

RON DAVIS AND BOBBIE FOWLKES-DAVIS, 6-D

Ron and Bobbie Davis, lifelong Detroiters, moved to Indian Village Manor in 2005 from North Rosedale Park. They value the community spirit, safety, low-maintenance living, and proximity to their church—Second Baptist Church of Detroit—where they married on Valentine's Day 1993.

Bobbie spent 35 years as a court reporter at the Thirty-Sixth District Court. At church, she serves as historian and manages the bookstore and gift shop, which she calls “a small business with a large mission.” In retirement, she graduated from Dorsey Culinary School, expanding on cooking skills taught by her grandmother. Recently, a hip replacement has her feeling renewed and ready for an active, pain-free life.

Ron serves on IVM's Finance Committee and owns Acrylic Specialties and Plastics, which creates custom displays for clients including the Detroit Institute of Arts and Michigan Central Station. At home, he built unique shelving for Bobbie's cookbooks and their bedroom.

Married 32 years, the Fowlkes-Davises are proud parents, grandparents, and great-grandparents devoted to family, faith, and community.
